

SPORIFY 23.1.2.1 Release

We are pleased to inform you that SPORIFY 23.1.2.1 was successfully released on Sunday, April 28 to the production environment.

This hotfix release responds to an issue that was reported to us regarding Veeva Vault authentication for some Veeva Vault Integration customers only. This issue was due to a side effect of Veeva authentication defaulting whereby SPORIFY was blocking login to the Veeva Vault for impacted customers. This has now been rectified.

Details of all product updates can be found in the release notes section of the SPORIFY menu.

If you have any questions about this SPORIFY release, please do not hesitate to get in touch with us.

Kind regards,
