

Welcome to the third quarterly newsletter of 2026, where we reflect on the news and events of the previous three months and anticipate what's coming next for SPORIFY.

Reflections

The biggest event for SPORIFY over the past few months was the launch of SPORIFY 2026.1. The UAT of Validation phase ran from June 8 to July 17, with Production go-live commencing on July 25. In this release, we introduced a variety of highly-anticipated new features and enhancements.

The Product Comparison tool was one of the major new features included in SPORIFY 2026.1. It is extremely useful because it enables users to compare a Primary Product with a Secondary Product, presenting a detailed analysis of the similarities and differences found between the selected records.

Additionally, Data Quality Insights were added to the Products Overview screen. This section displays record counts for Missing, No Differences, and No Inconsistencies as they pertain to each individual IDMP section, in reference to the comparisons performed on Source Products.

Enhancements were made to the Target Products screen too. For instance, users can newly save and reset their global default preferences via a Preferences fly-out menu and navigate to relevant RMS Term Details and Location Details pages from the Target Products table.

In terms of Administration, Audit Logs and Change Logs can now be filtered by Domain, making it quicker and easier to find the logs you are looking for.

Some important updates were also made to SPORIFY's Veeva integration, allowing administrators to manually trigger a Veeva sync for the Products domain. Furthermore, the existing Full Sync was expanded to include Products data.

This release likewise enforced username policy compliance across all tenants in response to updated security recommendations. Existing tenant admin accounts with the "admin" username have been renamed to "adminSPORIFY" while customers with usernames that do not meet policy standards must update their username before regaining their Active status in SPORIFY.

For more information about SPORIFY 2026.1, we recommend reading our Release Notes.

What's Next for SPORIFY?

A hotfix release, **SPORIFY 2026.1.1.1**, is scheduled for September 12. This release will improve performance and fix RMS synchronisation challenges with term-summaries after the latest SPOR RMS release in July.

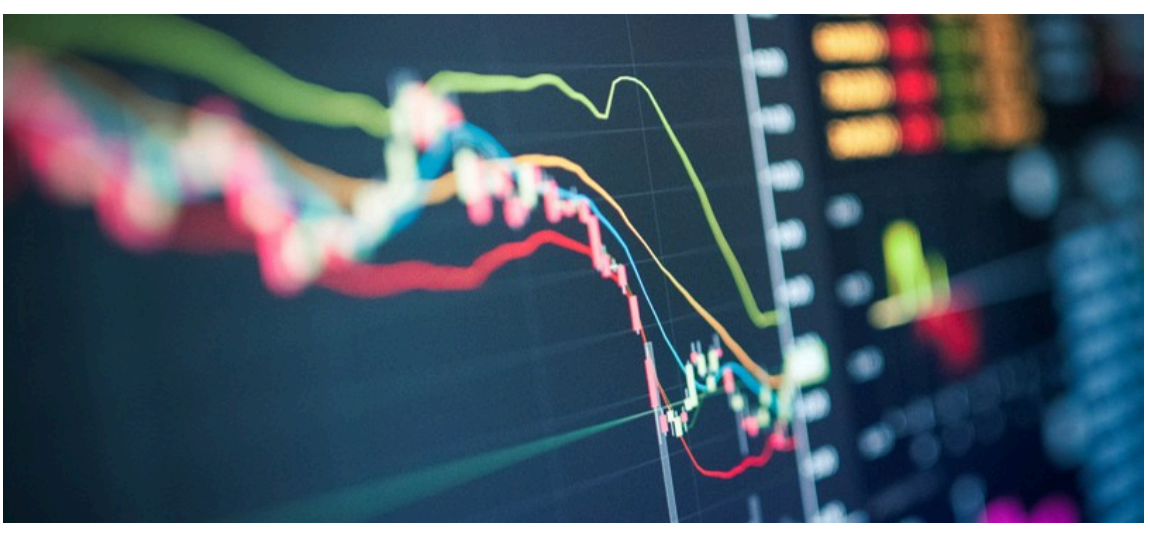

Additionally, our developers are hard at work on our next major release, **SPORIFY 2026.2**. This will be made available to customers on December 14, with the UAT of Validation phase running from September 21 to December 4.

It will introduce a number of convenient new features and enhancements, including:

- Extension of Product Module
- Enrichment of Veeva With PMS IDs

- Enablement of Customer Facing Product API for 3rd Party Integration
- Introduction of Insights Into New Products
- Uploading of Products Via Excel
- Addition of Product Matching on MA Numbers
- Enhancement of Product Comparison Feature

If you have any questions about this upcoming release, please do not hesitate to get in touch with us.

Upcoming Webinar

If you want to learn more about our next release, we highly recommend attending the **SPORIFY 2026.2 Webinar**, which will be held on Wednesday, September 16 at 14:00 UTC.

During this webinar, SPORIFY's Principal Product Manager, Katalin Burjan, will provide a detailed walkthrough of the new features that will be introduced as part of SPORIFY 2026.2. Attendees will also have the opportunity to ask any questions they may have.

If you want to get started on your preparations for the 2026.2 release or are simply curious about what the future holds for SPORIFY, this webinar will be an invaluable resource.
